

Appliance of banderoles on round cheeses:

- Gluing by cheese plastic or water
- Placement in automatic line or with manual input
- Because of fast production, switch time very suitable for small batches

Exclusive representative

BMA Nederland BV is exclusive representative for WMI Wilens Maintenance & Innovation

Description of the system

Fully automatic banderoling machine, available in different executions. Suitable for placement in an automatic line (for instance behind a plastifying machine) or for use in between cheese storage racks (mobile machine with manual input). Can easily be combined with coating and labeling machine.

Because of the use of cheese plastic the pores under the banderol are filled up and the banderol is firmly glued to the cheese. This virtually eliminates the risk of mould under the banderol. Using cheese plastic has another advantage. When cutting cheese, the banderol material will not come off so easily.

Capacity

Up to 850 cheeses per hour

Cheese dimensions

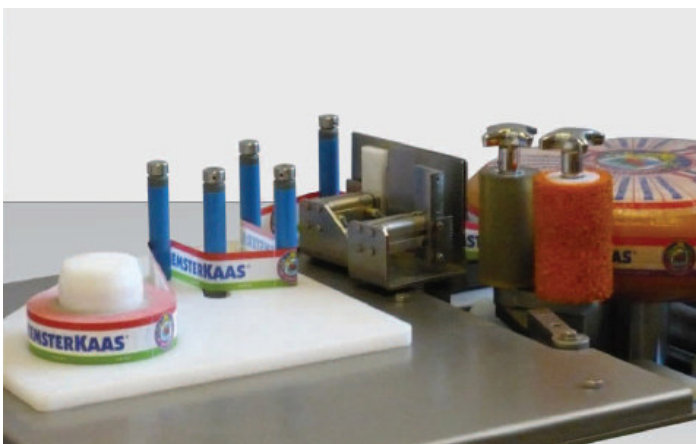

- Ø 200 - 400 mm
- H 80 - 170 mm

Banderole

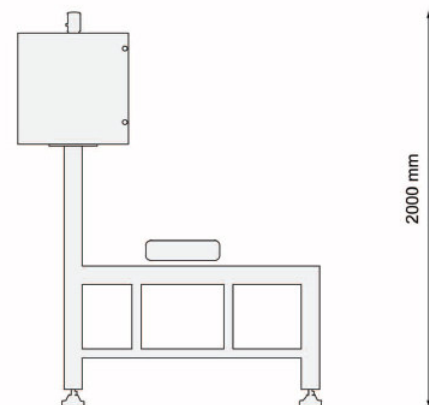

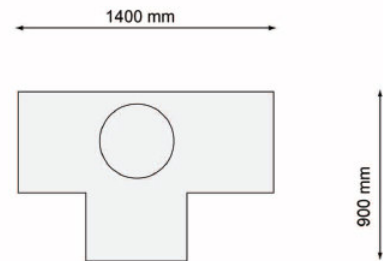

Tea-bag or Silk paper

Glue

Cheese plastic or water

Banderoling machine B1000
