

Brewer Steel Company enters new markets

*Water reservoirs
at a drilling site*

Besides being BMA's sole fabricator in North America, Brewer Steel Company's reputation as a reliable, quality fabricator is well-known in the Rocky Mountain area and throughout the Western United States.

The oil and gas industry has grown tremendously worldwide. Within the last year, several gas drilling operations have started up in Colorado, Wyoming, Oklahoma and Nebraska in the United States. Hence, there is a growing need to provide equipment and supplies to the drilling companies.

Brewer Steel has received a contract to fabricate on-site portable water reservoirs which are needed at the drilling sites. These tanks are approximately 40 metres (124 feet) in diameter and consist of (16) insulated panels that are 4 metres by 8 metres (12 x 25 feet). The tanks have a holding capacity of 6,000 cubic meters/36,661 barrels of fluid.

There is a big potential for serial build products like these portable water reservoirs. Brewer Steel is a custom fabrication shop and is currently researching more products that can be manufactured in low production alongside the individual custom projects.

To add to its capabilities, Brewer Steel integrated a tool shop in the first quarter of 2012, so that new services will be available in the future.
