

For faster discharge.

R-TYPE DISCHARGER UPGRADE KIT

Discharger and discharge valve actuator for the B series.

Batch centrifugals
B series

Time is money. Discharger upgrade.

One key benefit of the R-type discharger system is the maximised discharge contact length. The discharge plough extends across almost the entire basket height, saving 10 seconds per discharge cycle. A maintenance-free cylinder with hydraulic brakes prevents uncontrolled swinging into the product layer. The hydraulic circuit within the cylinder is a closed system. Installation outside the sugar area prevents contamination of the product.

Benefits

- Higher throughput by increasing the number of batches
- More efficient discharging
- Maintenance-free components
- Easy to replace thanks to identical fitting dimensions

The upgrade kit comprises

- Discharger
- Discharge plough with bearing for discharger rod
- Magnet valve
- Elbow plug
- Pilot valve with coil

Installation is performed by a centrifugal specialist from BMA.
