

Never out of sight.

SIGHT GLASS UPGRADE KIT.

Visual feed control for continuous centrifugals.

Continuous centrifugals
K2300/K2400 series

Massecuite flow. Under control.

BMA have developed an improved sight glass for visual monitoring of the massecuite entering a centrifugal. It consists of a hard-wearing transparent plastic tube clamped between two stainless steel flanges. The upgrade kit is available in sizes DN150 and DN200.

Benefits

- Better control of the massecuite flow
- Secure design of the sight glass clamping
- Easy to install
- Reduced maintenance costs

The upgrade kit comprises

- Massecuite feed duct
- Rubber compensator
- Sight glass
- Complete with flanges and stud bolts

Installation is supervised by a centrifugal specialist from BMA.
